The html has been accomplished proficiently. However occasional mistakes were found in the index page and page 2.

The website is written in english but the html attribute lang does not have a valid value.

The keywords were utilised though some are unacceptable as google could ban the website.

There is not the title, it is not good for the optimization

The images name contained extra characters

The contrast of the text was low and this impacts its readability.

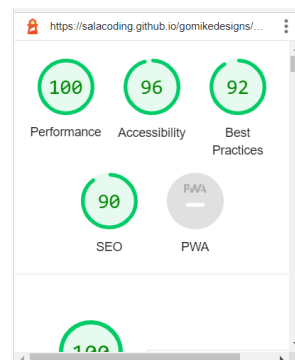

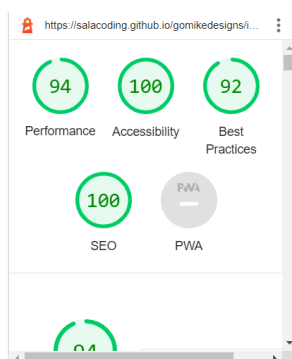

The Alt attribute can only contain the information for an image and not the keywords.

The Google Analytics code has not been added to the page.

The title and description are not well written.

The links were not direct to the external sites.

The texts did not contain tags for headings (attribute).

The html attribute lang has a valid value now.

The wrong keywords are deleted and replaced.

The title was added.

The extra characters in the images name were removed.

The contrast of the text is adjusted now is clear.

The Alt attribute contains the information of the image now.

The Google Analytics tracking code has been added to the page in the right place.

The title and description are now well written.

The links are directed to the external sites.

The texts contain the tags for the headings.
